Professional Summary

Experienced technology leader with 14 years in software development, designing and delivering large-scale Integrated Eligibility Systems for public sector clients.
Skilled in Java, Spring framework, Oracle Policy Automation, and AWS cloud with a strong focus on automation, performance optimization, and system modernization.
Demonstrated success in leading multi-phase releases, reducing defect backlogs, and enhancing Child Care, Medicaid, SNAP, and TANF programs.

Technical Skills

Languages/Scripting:	Java,PL/ SQL, JavaScript, HTML, JSP, Python.
Frameworks / Platforms:	Java EE (J2EE), Spring Boot, Spring framework, Oracle Policy Automation (OPA), Amazon Web services (AWS Cloud), Oracle Database, Weblogic, Tomcat, My SQL**,** PowerMock.
Technical Concepts/ Tools:	Object-Oriented Programming (OOP), Design Patterns, RESTful APIs, SOAP API, Microservice, RESTful Web Services, SOAP, Unit Testing, JUnit, Git, Bitbucket, JIRA, RTC, SonarQube, AppDynamics, SOAP UI, JSON, Maven, Liquibase.

Professional Experience

Accenture LLP (www.accenture.com) — Austin, TX

Associate Manager (Dec 2021 - Present)

- Led SNAPET public service program for a state client's Integrated Eligibility System, managing end-to-end delivery including System Test, User Acceptance Test, and post-production support with 4-8 resources. This improved **SNAPET case processing by 40%** for the county users by replacing their manual process and integrating SNAPET into the Worker portal.
- Led multiple product upgrade releases for the state client with 7-8 resources, adding valuable features to the client and improving case worker workflows. Each release was at least **~5000 hours of Development Effort**. Collaborated with cross-functional teams of systems analysts, project managers, QA and other developers to implement business requirements.
- Provided technical leadership and collaborated with a cross-functional development team, USDA team to implement the FNS National Accuracy Clearinghouse (NAC) REST API integration into the state client's Integrated Eligibility system enabling real-time validation to prevent duplicate SNAP enrollments across states and strengthen fraud prevention. **Conducted code reviews** to ensure quality and identify issues early in the SDLC.
- Converted SOAP Web Services from CMS like VLP, SSA to REST API and coordinated with the CMS Team for state testing.Created mock services for internal Testing of CMS services.
- Created citizen self service portal Dashboard by integrating with county worker portal for a state client using REST Open APIs.

Software Engineering Team Lead (Dec 2019 -Nov 2021)

Senior Software Engineer (Dec 2014-Nov 2019)

Software Engineer (Jan 2013-Nov 2014)

- **Resolved 12% of total defect** backlog while in the maintenance team, contributing to improved system stability and faster issue turnaround.
- Provided technical leadership in Implementing **automation for SNAP and TANF Notice of Actions**, eliminating manual notice creation and significantly improving processing speed and compliance.
- Led performance improvement of the Eligibility determination module brought an **improvement of 30%** for the overall execution time.
- Implemented child care program into state's Integrated eligibility system from case creation to eligibility determinations and creation of child care authorizations for TAP payment system.
- Collaborated with the DevOps team on migration to BitBucket. Established processes, created knowledge sharing documents, conducted training on BitBucket for Developer efficiency with new systems**.**
- Worked for Accenture Products & Platforms, designed and developed rule-based automation solutions for state clients' Integrated Eligibility Systems by customizing the Accenture Health Software Suite product using Oracle Policy Automation, Java, Spring Boot, Oracle, Web Services SOAP & REST and J2EE stack. **Automated 40% of Medicaid programs.** Created Technical documentation to support software development.
- Contributed to reducing **400+ critical/high defects** in Eligibility Benefits system as part of Defect Beatdown initiative, earning client appreciation.

Cognizant Technology Solutions (www.cognizant.com) — Pune, India

Programmer Analyst (Jan 2011-Dec 2012)

- Led end-to-end solutioning and development using Oracle Policy Automation (OPA), Siebel, Spring, and Java, including dynamic UI creation, GAP analysis, and technical design for a leading global investment bank in the UK. **Improved worker efficiency by 30% using OPA Web Determinations.**
- Trained new team members in Oracle Policy Automation, supported post-production warranty, and resolved complex OPA issues across releases and Siebel integrations.
- **Reduced incoming production tickets by 13%** during warranty phase by proactively resolving root causes and stabilizing critical modules.

Learning & Personal Projects

- Weather App in Angular - Created a weather app as part of the Angular Classroom training with routing, services, and components.
- Stock Market Screener - Created a Stock market screener dashboard using python, streamlit, yfinance. It calculates and visualizes relative strength of stock with the market.
- Completed the Cloud Resume Challenge — a full-stack cloud project involving a static resume site (HTML/CSS/JS) deployed via cloud services like AWS S3, CloudFront, and Route 53, with a serverless visitor counter using API Gateway, Lambda (Python), and DynamoDB. Implemented IaC (SAM/Terraform) and CI/CD via GitHub Actions. https://cloudresumechallenge.dev/

Education & Certifications

- Bachelor's Degree, Computer Engineering, C. K. Pithawala College of Engineering & Technology, Surat, Gujarat (IN), 2006-2010
- Amazon Web Services (AWS) Solution Architect Associate
